Fewer forklifts ✓

In more than 20 years, the Mobile Easykey software has not once shown that a company has had too few forklifts.

Within a very short time after implementation, you can see which trucks you really need.

Fewer accidents ✓

In particular, the personal transponder promotes employees sense of responsibility when using the forklift. In addition, there is the patented Crash Sensor, which „learns“ the conditions on site. The number of accidents and thus the repair costs drop immediately.

Reduced maintenance costs ✓

Dynamic maintenance planning „real operating hours“ instead of rigid intervals avoids unnecessary workshop costs and stays. The software reminds the defined responsible persons in good time – also of UVV-appointments.

Lower battery costs ✓

In addition to monitoring the electrolyte level, the software provides valuable data for each individual battery – with the aim of efficient and sustainable use.

Lower leasing costs ✓

A leasing forecast up to the end of the term is available at any time in the software. In this way you can prevent so that leasing costs do not get out of hand.

Less hassle ✓

Sure, the introduction of Mobile Easykey means an investment of time and money. This pays off faster than you might think.

It is not for nothing that half of all German DAX-Companies are our customers (the other half have no forklifts).

The colleagues from occupational safety love Mobile Easykey. The works council and data protection appreciate the data economy and the GDPR conformity of the software. And your management will find the savings considerable.

Small fleet, large fleet ✓

For every device, from pallet trucks, work platforms or all-terrain heavy-duty forklifts – for every device of every manufacturer and for every fleet size, we have the right and appropriate equipment.

Easy to recognise ✓

The FLT-KPI is one key figure that shows you immediately whether a forklift is being used efficiently. The key figure takes into account the actual use of the device.

Easy to implement ✓

We would be happy to show you, without obligation, how quickly you can introduce Mobile Easykey and what you need for this. Just ask the members of our sales team.

More info ✓

Videos, clear tables, job reports, Press reports, Customer testimonials... all about Mobile Easykey:
